

*A New Way to Experience Telecommunications*

## The Most Secure Technology Available For Private Networks

IElement's L2PN™ solution is based on the most advanced layer 2 switching technologies that utilize Permanent Virtual Circuits (PVC's) to deliver your information securely from one location to another without the use of a firewall or encryption devices.

With IElement's exclusive L2PN™ solution, your remote network locations are connected through IElement's nationwide network allowing the most secure transfer of documents, databases, and virtually anything else on your desktops and servers between your headquarters and remote locations. Each location is provided with dedicated access and extended services with maximum efficiency.

## Cost Effective Alternative

Avoid the high cost and high risk of traditional remote access methods such as frame relay or expensive leased lines. Because the L2PN™ solution utilizes a completely private network, there are no additional requirements that force you to purchase expensive Virtual Private Network (VPN) hardware or software.

## Significantly More Efficient

The L2PN™ Solution allows your data to be delivered at the fastest and most efficient speeds available today. With traditional Layer 3 Virtual Private Network offerings, additional encryption hardware is required which typically degrades connection speeds by as much as 33%.

In addition, unlike traditional encryption-based Virtual Private Network Layer 3 technologies, IElement's L2PN™ Solution avoids the use of the public Internet for transferring information between locations so all of your information travels on our private and secure network. You'll experience the highest level of security and efficiency with IElement's L2PN™ Solution.

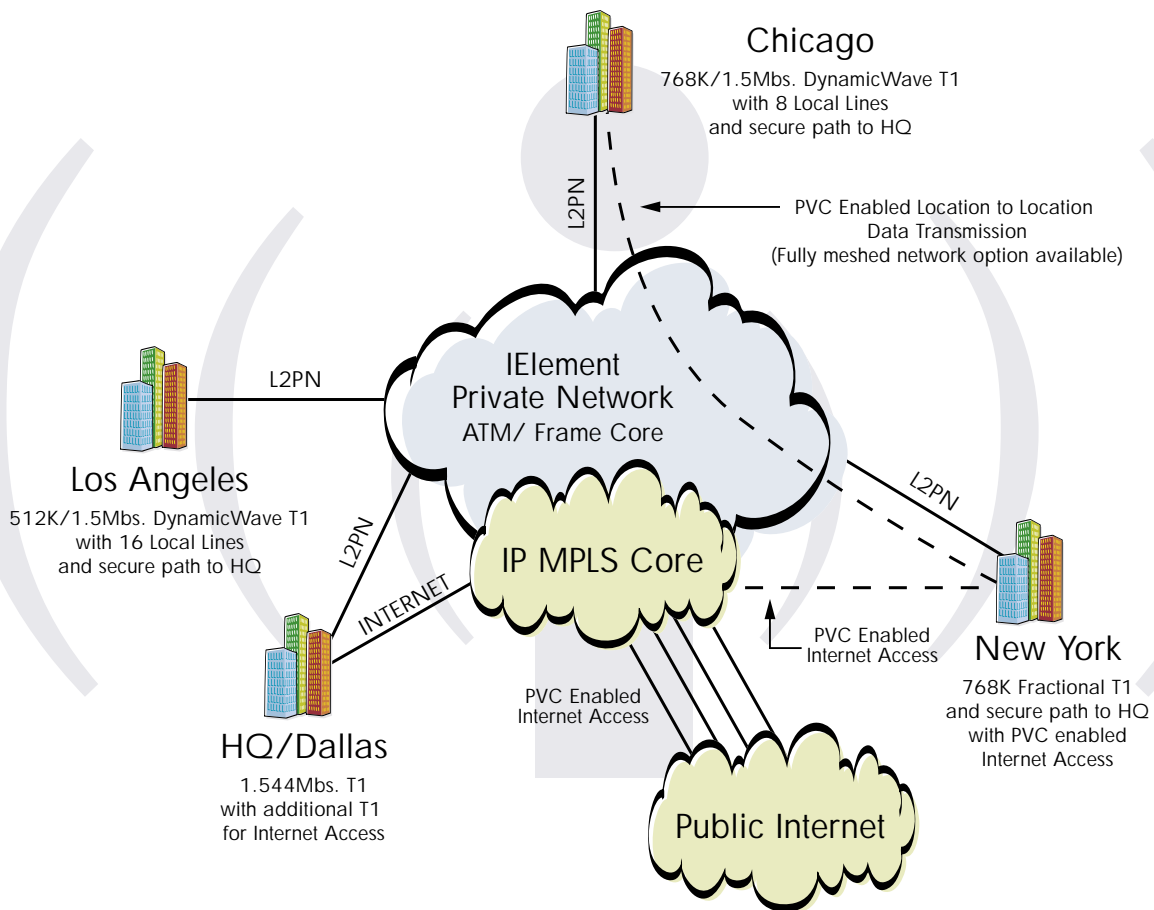

### Experience the L2PN™ Solution Difference:

- Built-In security
- No encryption or firewalls
- Customized four digit dialing plan
- Free office-to-office calling with four digit dialing
- Compatible with virtually any phone or data network
- Nationwide coverage
- Minimal deployment costs
- Integrates with your current phone system

# L2PN™ Solution- Illustrated

*A New Way to Experience Telecommunications*

## Experience the L2PN™ Solution Difference:

- Internet access can be controlled from HQ, or any location can have separate and distinct Internet connections via permanent virtual circuits (PVCs).
- L2PN™ is based on safe, secure and reliable asynchronous transfer mode (ATM) technology that can be scaled from 3 locations to 3000.
- IElement's next generation core can support the hub and spoke network layout, as well as the mesh network model.
- Customized four digit dialing is available between customer's locations across their network, thus eliminating interoffice toll charges.
